

# ORDER INN

---

# PROBLEM

---

Waiting in hard pressed restaurants for some hours to get the food to us is the most complicated and time taking process

- Ex : Vit hostel FoodCourt

*we need to order food near receptionist and server need to search our seating to bring food .*

# SOLUTION

---

One application that eradicates the complete issue that is described earlier is "Order Inn"

# ABOUT APP

---

Making restaurant orders easy and simple when we go for dine in busy restaurants.

# ORDER INN BUILD AS

---

ORDER INN Client

ORDER INN Server

# MAKE YOUR ORDER

---

## Customer End

Customer relaxes at the table by booking table and ordering food, waiter call through this application by single click

## Admin End

Customer when logged into a table, Admin provides all the functionalities requested from the customer end.

# MAKE YOUR ORDER CLIENT

## LOGIN

When we go to table, login to the application with the QR scan placed on the table so that you can start using dine in functionalities

## MENU

# MAKE YOUR ORDER CLIENT

## ORDER

You can order only if the user is logged in. By adding the items to the cart and with simple hit, customer can place their order

## BILL

Once you are done with the order we can request the bill by single click in the application.

# MAKE YOUR ORDER SERVER

---

## Table 1

Once the customer logged in to the table using QR scan the table card color will change as per the functionality requested.

## Table 2

If the customer is logged in and placed order card color will change in to the brown color

## Table 3

Customer requested for the waiter call that particular table card color in server side will change in to the blue color .

## Table 4

If the customer requests for bill, that particular table card color will change to yellow color

# SUMMARY

---

- Visibility of table ordering system on changing colour codes and selecting menu items from the list of display in app.
- Admin /Reception can manage all the items ordered and mediate to the chef.
- Chef can accept or decline status provided through server side app.
- Using web app can monetize the orders
- Easy and quick access through IP address inside the restaurant.
- QR code scan for the table selection makes easier to identify empty tables.
- Can provide reliable and efficient service to the customers.

# THANK YOU!
